

PHONOTHERM®200

AN EXCEPTIONAL CONSTRUCTION MATERIAL MEETS PERFECT PROCESSING

Sustainable profiles for the thermally optimised building connection:

water resistant

nigh pressure resistant

biologically and ecologically harmless

optimal nsulation

water vapour permeable

Thermal conductivity 0.076 W / (mK)

Examples of application areas: Phonotherm® 200 has many applications. It is used, among other, for partitions in wet and damp rooms, as concealed edges or edge bands for doors for wet and damp rooms, window finishing profiles, roller shutter boxes, working boards in kitchen, façade construction, spacers, decoupling plates in buildings and in vehicles (e.g. to prevent thermal bridges).

Environmental protection: The created waste is 100% recyclable. Phonotherm® 200 is free of formaldehydes and does not emit physiologically significant quantities of chemical substances.

Processing: Use conventional tungsten-carbide tipped woodworking machinery for working. In principle, we recommend an extraction system. The dust created during machining (sawing, grinding, milling) is physiologically harmless and not fibrous. Predrill before screwing or use self-drill screws. Phonotherm® 200 can be screwed, the material can be milled, ground, drilled and can be glued together.

Gluing: Gluing of butt joints of boards, cuts and strips is simple, using 2-component polyurethane adhesives for instance. Single or 2-component polyurethane adhesives are suitable for gluing of surfaces. For assistance please enquire about your specific application.

Storage and transport:

Phonotherm® 200 should be stored dry and on a flat surface. It is not subject to the Ordinance on Hazardous Substances or other storage and transport regulations.

The advantages:

- economical
- moisture-resistant
- does not age or rot
- resists roots
- good thermal insulation properties
- temperature-resistant

- very good resistance to chemicals
- recyclable
- biologically and ecologically harmless, resistant against fungi and rot
- easy to work

Dimensions:

Standard sizes: 2400 x 1350 mm or 2400 x 1500 mm

Thicknesses: RG 500 from 15 mm to 60 mm

Other sizes and thicknesses are available on request. Special sizes and laminations are possible in principle. We can tailor the boards to suit most of your needs. This would require a detailed discussion and drawings, if possible. Please contact us for information

Thermal Bridge Coefficient Ψ (Psi-value) and Temperature Factor fRsi the Phonotherm® 200 as degree for the confirmation of thermal bridges according to EnEV (German law for energy savings) for Phonotherm 200 as base profile for window construction:

| Thermal Bridge Coefficient Ψ (Psi-value) | Requirement of DIN 4108 |
|---|---------------------------------------|
| 0.057 W/(mK) | ≤ 0.090 W/(mK) Conditions fulfiled |
| Temperature Factor fRsi | Requirement of DIN 4108 |
| 0.80 | ≥ 0.70 Conditions fulfiled |

Tab. 2

Use of base profiles made from Phonotherm 200 meets the requirements of German standard DIN 4108-supplement 2. The blanket confirmation of thermal bridge conditions according to EnEV may be applied.

Basic conditions

The structural and climatical conditions meet requirements of the German standard DIN 4108-supplement 2, and standardized conditions of DIN ISO 10211. For simplification of the calculation, the building component window was adopted as a board with a thickness of 70 mm.

Technical Details

| Phonotherm 200 | RG 500 | |
|--|--|--|
| Material | CFC-, HCFC- and formaldehyde-free polyurethane | |
| Raw density | 550±50 kg / m³ | |
| Bending strength Thickness of sheet is 15mm | approx. 7.8 N / mm ² | |
| Compression strength at 10% compression | approx. 7000 kPa | |
| Modulus of elasticity | approx. 500 N / mm ² | |
| Screw withdrawal resistance* | approx. 650 N | |
| Thickness swell after 24h in water | approx. 1% | |
| Water absorption after 24h in water | approx. 5% | |
| Dimensional change after 24h in water | approx. 1% | |
| Elongation coeffcient in the range -20 to +60°C | approx. 28.375 · 10 ⁻⁶ / K | |
| Water vapour diffusion resistance values for 15mm (5/8") material thickness for 20mm (3/4") material thickness | μapprox. 17/sd approx. 0.27 m sd approx. 0.27 m | |
| for 30mm (1 3/16") material thickness for 50mm (2") material thickness | μapprox. 17 / sd approx. 0.27 m sd approx. 0.27 m | |
| Thermal conductivity λ10 | approx. 0.076 W / (m⋅K) | |
| Fire behaviour | Class E, building material class B2 non-flammable drop free | |
| Residual moisture | 2-4% | |
| Thickness tolerance, not sanded | ±0.4mm | |
| Thickness tolerance, sanded | ±0.2mm | |
| Thermal stability | in the range -40 to +80°C | |
| Resistance against ageing | resistance against putrefaction and non-rotting | |
| *Test screw: SPAX T-Star plus 4.0 x 60 | | |

PERFECTION IN PANEL PROCESSING

Phonotherm® 200 boards are made of high quality CFC-, HCFC- and formalde-hyde-free polyurethane hard foams. In a special composition including the addition of auxiliary materials this material is pressed into high quality boards. Phonotherm® 200 is a functional material that convinces through extraordinary properties. Phonotherm® 200 is moisture-resistant and has excellent thermal insulation properties.

Its resistance to moisture makes Phonotherm® 200 very durable and prevents it from rotting. This renders Phonotherm® 200 far superior to conventional wooden boards such as press boards and MDF boards, yet has similar machining properties. Phonotherm® 200 can be machined using normal carbide tools and can even be milled in fine detail without danger of break-out. Phonotherm® 200 is also resistant to chemicals, easy to work and can be laminated and combined with other materials.

Attention! Important Note:

Above information are based on best present knowledge of current technology, but do not guarantee faultless processing of our products. The information is based on practical results of our tests, but is not binding and does not constitute warranties of characteristics in terms of Federal Supreme Court jurisdiction. Our information does not constitute a legally binding assurance of certain properties or suitability for a specific purpose. Supplementary information by our specialists are merely recommendations, for which no liability is accepted.

Due to the many possible applications of our products, we recommend subjecting the project to a thorough suitability test on original materials before release for further application.
